## **NAME**

tz play - generate and play sound fragments

## **SYNOPSIS**

tz play [infile [outfile]]

## **DESCRIPTION**

Convert *infile* to *outfile* if necessary and play it using **xdg-open**. Only WAVE, AIFF, MP3, and ASCII files (with **tz mel** or **tz guitar** input) are supported. This is a simple wrapper program added for convenience. Filenames default to */dev/stdin* or */dev/shm/tmp.wav*. The dash (-) is a shorthand for the default value.
